Java developer
Vadim Bilianivskyi

Summary

I'm a Java developer with three years of experience in Java backend development primarily for the insurance industry. My focus is on timely and high-quality delivery of backend services, working closely with cross-functional teams to align solutions with business goals and regulatory requirements, ultimately enhancing efficiency and customer service. I'm eager to expand my experience with new domains and technologies.

Skills

Java	Spring	Database	Testing	Other
• Core	• Core	• SQL	• Junit5	• Docker
• Git	• Web	• Hibernate	• Mockito	• Kafka
• Maven	• MVC	• PostgreSQL	• Testcontainers	• AWS
• Gradle	• Data JPA	• MySQL		• Redis
	• Security	• Liquibase		

Experience

3 years in "PRESTIGE"

- Extracted microservices from modular monolith following TDD methodology
- Vastly expanded test coverage of insurance interest rate calculator service, ensuring 90% compliance with business requirements and regulatory norms
- Improved REST performance by 32% by implementing distributed cache for external APIs
- Performed cross review in multiple teams to ensure alignment of code style and guidelines, preventing technical debt
- Was responsible for notification delivery service, implemented with Spring Boot, Kafka
- Covered backend services with business and performance metrics to ensure transparent observability and enable alerting to swiftly react to risks
